PROFESSIONAL SUMMARY

Senior Software Engineer with 12 years of end-to-end ownership of production systems — from API design and database architecture to deployment, reliability, and stakeholder alignment. Proven track record owning mission-critical CRM infrastructure independently across 5 business units while shipping modern SaaS products with auth, payments, and AI integration. Deep expertise in TypeScript, React, Node.js, and PostgreSQL.

EXPERIENCE

Senior Software Engineer, JANUS et Cie

California

Sole engineer responsible for full-stack development, infrastructure, security, and architecture across the company's entire technology footprint.

2020 - Present · Infrastructure, Platform Modernization & AI Integration

- Maintained 100% production uptime across a 9-VM Hyper-V/Citrix infrastructure by owning full certificate lifecycle management — including EV code signing renewal, JAR re-signing, and coordinated zero-downtime deployments across all nodes with validated rollback procedures.
- Improved application reliability by ~20% (measured by production error rate reduction) through performance profiling, hardened error handling, and load-balancing across a 9-VM cluster.
- Executed 3+ zero-downtime production upgrades per year with zero post-deploy incidents, using documented rollback playbooks and staged validation protocols.
- Designed and implemented RESTful APIs supporting system integrations and internal tooling, improving data throughput and reducing integration latency.

2014 - 2020 · Full-Stack Development & CRM Platform Ownership

- Reduced manual operations by ~50% for product management teams by leading a full UI/UX and workflow redesign of a mission-critical CRM platform serving 5 departments — measured by task completion time and support ticket volume.
- Deployed and operated Java-based services on Apache Tomcat, managing WAR releases, environment configuration, and post-deployment monitoring.
- Cut cross-team support dependency by ~30% (measured by inbound escalation volume) by authoring technical documentation and delivering structured internal training for non-engineering stakeholders.
- Owned full feature lifecycle — requirements gathering, architecture, build, deployment, and iteration based on live usage data.

SELECTED TECHNICAL PROJECTS

THREAD — www.thread-game.io

2026

Next.js · Upstash Redis · Supabase · Stripe · Vercel · Daily Word Puzzle Game

- Architected an AI-driven puzzle generation pipeline using Claude (Anthropic) with a multi-layered validation system ensuring quality and uniqueness at scale.
- Engineered a two-tier Redis caching strategy (permanent archive + 25-hour TTL) backed by a sorted-set index, enabling sub-millisecond puzzle retrieval.
- Implemented complete SaaS monetization with Supabase authentication, Stripe Checkout (monthly + lifetime tiers), and webhook-driven role sync.
- Shipped complex client-side game mechanics including staggered tile-reveal animations and Wordle-style letter scoring across mobile, tablet, and desktop.

Plotly — www.plotly.watch

2026

React Native · Node.js · PostgreSQL · Cross-Platform TV Tracking & Notification App

- Launched a cross-platform mobile app with background-driven push notifications and per-user scheduling logic across multiple time zones.
- Achieved zero duplicate notifications by implementing idempotent DB operations and composite indexing strategies.
- Built async data-sync pipelines handling scheduled background jobs, improving notification delivery reliability by ~35% after resolving time zone and data-freshness edge cases.

SKILLS

Languages: TypeScript, JavaScript, SQL, Java

Frontend: React, Next.js, React Server Components, Tailwind CSS, HTML/CSS

Backend: Node.js, Express, REST APIs, Serverless Functions, Apache Tomcat

Databases: PostgreSQL, MongoDB, Redis (Upstash)

Cloud & Tools: Vercel, Git, GitHub, Stripe, Supabase, Anthropic SDK

Infrastructure: Hyper-V, Citrix, Apache Tomcat, WAR deployment, certificate lifecycle management

Engineering: SaaS Architecture, API Design, Performance Optimization, End-to-End Ownership, Zero-Downtime Deployment

EDUCATION

California State University, Fullerton,

2019 | Fullerton, California

Bachelor of Science in Computer Science
